10G optical modules and 100G optical modules

Overview

10G, 40G, 100G optical modules have the following three kinds of differences. Optical transceivers, also known as optical modules, are key components to enable fiber optic communications, and they play a vital role in data center systems such as servers, network equipment, and storage systems. With the continuous growth of data center network traffic, the demand for optical. Deployment flexibility with 800G (dual 400G), 400G, 100G, 50G, 40G, 25G, 10G or 1G modules. QSFP+ Universal transceiver for 40G operations over duplex multi-mode and single-mode fiber.
