A separate lighting distribution box should be installed

Overview

If they are placed in the same distribution box, the power supply and lighting lines must be installed separately. It takes the incoming power and safely distributes it to different circuits throughout your building. A separate circuit breaker should be planned for each circuit, for example for a specific lighting group. Switch box and its control of fixed electrical equipment horizontal distance should not exceed 3m. Measure: According to code requirements, a protective earth (PE) busbar must be installed inside lighting distribution boards (panels), and all protective earth conductors must be connected to this busbar.

A separate lighting distribution box should be installed
