Apexai server

Overview

Covering training, inference and hybrid compute workloads, ApexAI offers server products tailored to various AI workloads and deployment environments, supporting flexible scaling from single nodes to clusters to meet diverse compute demands. This repository contains a collection of ApeXai Protocol servers for various trading use cases. These servers are built using FastAPI and can be deployed to a decentralized compute platform like OG or Akash. Grace—built to manage embedded software execution with the precision, reliability, and determinism your system demands. We build intelligent, scalable, and accessible AI-driven platforms that empower businesses to automate processes, unlock insights, and make smarter decisions with data, design, and innovation. The ApeXai Trading Servers provide MCP-compatible interfaces for executing cryptocurrency trades on major exchanges. The best AI Features (many models to choose from) -Utility features -Built in image manipulation -Minigames!!! -Search websites -Summarize text AND MORE!!! Regularly updated! Feel free to drop in and have a look No reviews here yet!.
