# **Can a fiber optic transceiver be directly connected to a PoE switch port**

## Overview

---

But since most PoE and fiber network devices cannot be connected directly, to integrate fiber optic technology into the PoE system, certain media conversion needs to be accomplished. Most optical fiber cables can carry a network at 1 Gbps up to 10 Gbps in couples of or dozens of kilometers. Classified as Power Sourcing Equipment (PSE), OmniConverter compact PoE switches. Fiber optic transceivers are the crucial components enabling this connectivity, acting as the bridge between electronic network devices and the optical fiber cables that carry data across vast distances. This device helps to make different networks compatible and facilitates data transmission between them.
