Can a router without fiber optic connection be used

Overview

A fiber router is designed to work specifically with fiber optic internet connections, providing faster and more reliable speeds compared to a normal router that typically works with traditional broadband connections. Some ISP's use ONT's that have integrated routers - its easier for THEM but it gives them more control over your network. Ask them if they can disable any "router" functions in the ONT to let you use your own router. There are both wired and wireless methods of accessing the internet without a coaxial outlet. In this guide, we'll explain router compatibility, setup steps and whether upgrading your router is necessary to maximize fiber speeds.

Can a router without fiber optic connection be used

Probably a stupid question, but will fiber be able to plug

Technically you don't need to use an ONT if your router supports fiber, but as
