Copper wire for repeated grounding of distribution box

Overview

Equipment-Grounding Conductor — In addition to making good connections through each bolt or stud, use either 1-inch copper braid or 8 AWG minimum stranded copper wire to connect each chassis, enclosure and central ground bus mounted on the back-panel. • Good system grounding provides the path for normal load and fault currents while maintaining load and controls temporary overvoltage. Find the grounding bar or PE bar Open the distribution box and find the position marked with the grounding plate or PE letter. Wire with eyelets can be cut to length and mounted without terminating, so it's good for applications that require ground wire to be. For economic reasons, it is possible that different materials, such as copper-clad steel, will be utilized in certain circumstances.
