Dell Fiber Optic Storage Array

Overview

PowerVault ME5 arrays support direct-attached Fibre Channel (16/32 Gb), iSCSI (10/25 Gb), and SAS connectivity. Using direct-attached hosts removes the financial costs associated with a SAN fabric from the environment but limits the scale to which the environment can grow. Selections may result in additional updates to the overall configuration, which may impact the price for Support and Services and the total overall price and savings for. This module is required when utilizing high-bandwidth x8 SAS lane connections for the 80-drive DAE. The SAN solution is ideal for entry-level storage consolidation that require high availability, high performance and business continuity without sacrificing ease of use and reliability. 📌 NOTE: A NOTE indicates important information that helps you make better use of your computer.
