# **Dell optical switch indicator light is 1**

## Overview

---

If the LED next to the switch illuminates, the problem may be with your system board. It lists the diagnostic LEDs and Beeps that are built into them for diagnostic use during a No POST situation. To help troubleshoot a problem, your computer has four lights labeled 1, 2, 3, and 4 on the front panel. This guide explains how Dell laptops and desktops use LED light patterns and beep codes to indicate hardware issues during startup. Most of these symptoms are related to a failure to power on, complete power on self-test (POST), screen issue, or an issue with booting. I clean it and after assembling all parts I plug the power cable in psu and my PC starts automatically and power button is flashing Amber light also 1 & 3 diagnostic lights are flashing and psu rear/back light is flashing A possible system board, power.
