# **Enable Telnet on PoE Switch**

## Overview

---

The safe defaults mode runs an interactive script that allows you to enable or disable SNMP, Telnet, and switch ports. When you set up your switch for the first time, you must connect to the console port to access the switch. User-created VRs are supported only on the platforms listed for this feature in the ExtremeXOS 31. How do I fix this?

How do I confirm on the screenshots below that I do have vlan 1 Untagged, and vlan 20 tagged on a certain. First of all, we will check our interface IPs by running show ip interface brief and choose an interface for telnet.

## Enable Telnet on PoE Switch

---

### Restarting PoE via SSH on a USW-Lite-16-PoE , David Hutchison
