Enable downlink fiber optic on Huawei router

Overview

Execute the command "combo enable fiber" in interface mode to switch to the optical interface; on the contrary, "undo combo enable fiber" switches to the default electrical interface state. The Combo interface, also known as the optical-electrical multiplexing interface, consists of two Ethernet ports (one optical and one electrical) on the device panel, and there is only one forwarding interface inside the device. To check the interface status, run the display interface command and focus on the current state field. I have an optic cable that is plugged into the internet providers provided router, Huawei EchoLife HG8145V5. I have recently bought a new router (Huawei AX2) and it doesn't have an optical fibre port like my old one. When you use the Internet to access a specific port on the WAN IP address (for example, in order to access a webcam on a home network), the router will check the port value against the port mapping.

Enable downlink fiber optic on Huawei router

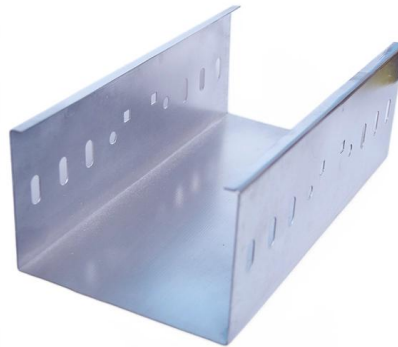

Enabling Pass-Through on Huawei Optic Router for Seamless Internet

Learn how to enable pass-through on your Huawei optic router to easily connect to your internet service provider's router, such as the Huawei EchoLife HG8145V5 or a TP-Link AC2300v2,

Troubleshooting Interface Down Problems

If the training disable command is configured on two 40GE or 100GE optical interfaces that have 40GE copper cables connected and a 40GE optical module is installed on one interface, this interface

Huawei FTTR for Home , FTTR-B Solution , Fiber to the

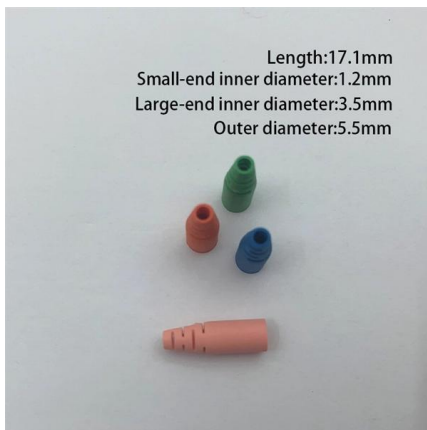

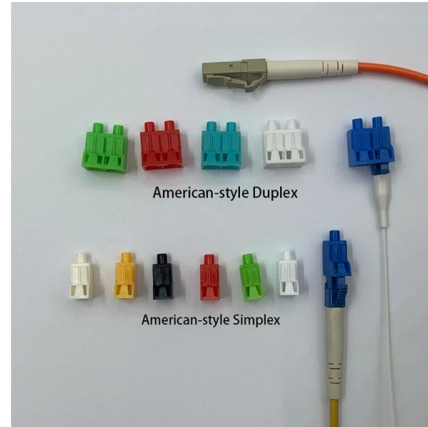

Huawei's fiber to the room (FTTR) solution extends fibers to rooms and provides various gigabit Wi-Fi 6 master/slave FTTR units, all-optical components, and

What do the ports and buttons on my HUAWEI WiFi AX2 do

When the router is powered on, you can press and hold the reset button for more than 8

seconds until the indicator turns off. The router should now be restored to factory settings. By touching the

Connecting Cables

The fiber connector connected to the optical port on the wall varies depending on actual conditions. To ensure normal use of fibers, make sure that the fiber bending radius is larger than 30 mm. There is a

How do I disable or enable the Link+ feature on my router
