External cable routing

Overview

Internal routing offers a sleek, modern appearance by hiding cables inside the frame, while external routing exposes cables for a traditional look. External routing allows easier access for maintenance, repairs, and troubleshooting compared to internal cable setups. In such cases, an external cable routing system provides a viable solution, allowing riders to enjoy the benefits of a dropper seat post without needing to modify or replace their frame. Smooth shifting, responsive braking, and clean handlebar setup all depend on properly routed cables.

External cable routing

LED DISPLAY PANEL

CURRENT STATUS CLEARLY VISIBLE
