Fiber optic cables can be used without pigtails

Overview

Depending on the application and the connection method, you may need to use either a fiber optic patch cable or a fiber optic pigtail. A fiber optic pigtail is a type of optical fiber cable that has a pre-attached connector on one end, with the opposite end left without termination. These cables come in various configurations, including simplex (one fiber), duplex (two fibers), or multi-fiber options like MTP / MPO cables. Although they look similar, they have significant differences in function, structure, and application scenarios.
