## Overview

---

The connector ensures precise physical and optical alignment between the fiber ends. Fiber optic patch cords, also known as fiber optic patch cables or fiber jumpers, are indispensable components in modern optical networks. Each patch cable includes two protective caps that shield the ferrule ends from dust. Whether back in the late 1990s or today, you will see 8P8C RJ45 type connectors at the end of Ethernet patch cords and keystone jacks mounted in walls running back to patch panels. The T568A and T568B color code has remained the same too, dictating the wiring color code sequence to make proper.
