High Beam Module Issues

Overview

If your high beams are not working, the most likely cause is a blown fuse or a burned-out bulb — both of which you can check yourself in under 15 minutes. That said, there are seven possible culprits, ranging from simple fixes you can handle at home to electrical faults that need a mechanic's. Automatic high beam (AHB) systems, sometimes marketed under proprietary names like IntelliBeam or SmartBeam, are designed to enhance nighttime visibility by automatically switching between high and low beams. These systems use forward-facing cameras or sensors to detect light sources from oncoming. Auto High Beam is a safety feature that controls the headlight operation and lights up the road in front using low and high beams.
