High-frequency switching power supply remote monitoring type for campus network use

Overview

The system utilizes the parallel of intelligent high-frequency switching power supply module and N+1 redundant hot standby for charging and float charging and adopts the computer monitoring technology to achieve the intelligent management of storage battery, with four-remote . 2TR is designed for use on production and inspection lines for high - frequency components capable of low supply current and low voltage operation that have become dominantly popular in recent years. CyberPower Monitored Power Distribution Units (PDUs) provide network-grade power distribution and remote/local monitoring. Power status can be monitored over the network, using the CyberPower Management Console and the RJ45 Ethernet port, or locally by using the digital LCD meter. REF_8KW_HFHD_PSU can deliver 8 kW steady state maximum output power in the specified 180 V - 277 V AC input AC voltage range, with a peak efficiency of 97. A switching power supply delivers efficient, high-power output with minimal heat dissipation, making it ideal for high-speed testing and power-hungry applications. Designed for compact, lightweight performance, it ensures stable, reliable power in R&D, production, and industrial environments. From benchtop and modular power supplies to rack-mounted industrial power subsystems, AMETEK Programmable Power is a leader in designing and manufacturing precision, programmable, and multiple-channel DC power supplies. Ranging from 30W to 150kW, Sorensen DC power supply products are used in R&D.
