How far should the lighting distribution box be from the door

Overview

Most residential construction adheres to a conventional placement range of about 4 to 6 inches away from the door casing. This measurement is determined by two practical considerations related to the wall structure and the trim. In the case of a lightswitch, should it go immediately on the double stud for a door frame (3 inches off the door), or should I add a small piece of 2x4 onto the double stud and place the light switch box on that (4. It's recommended that a switch should be installed at least 8 inches from the frame to leave space for the switch plate.

How far should the lighting distribution box be from the door

What should the distance be between the floor and the
