How many meters is the distance for wired fiber optic communication

Overview

Fiber optic cable can be run anywhere from 300 meters up to 80 kilometers (roughly 50 miles) depending on the cable type, transceiver used, and network standard. For most enterprise or data center applications using multimode fiber, the practical limit sits between 300 m and 550 m. There are three main reasons for this: First, high-bandwidth signals are more susceptible to chromatic dispersion than. In reality, fibre optic distance limits are shaped by several key factors: Singlemode fibre (SMF): With a core diameter of $\sim 9\mu\text{m}$, singlemode fibre allows light to travel in a single straight path. Range tells you how much ground you can cover before needing tools like optic cable extender devices or extra cables.
