## Overview

---

There are five standards for Gigabit Ethernet using (1000BASE-X), (1000BASE-T), or shielded copper cable (1000BASE-CX). Gigabit switches are available with 8, 16, 24 or 48 ports and are usually equipped with multiple RJ45 interfaces and SFP slots. The switches work with twisted copper cables and optical SFP transceivers, which work with corresponding patch cable types. In addition to the differentiators of speed rating and number of ports, there are.
