# **How much does an East Asia cloud computing AI server cost**

## Overview

---

Standard 3–5 year plans typically range from \$15,000 to \$40,000 per server, covering firmware, diagnostics, and parts replacement. Vendors like Supermicro offer flexible, OpEx-friendly options to help manage these expenses. AI servers, such as the HPE XD685 and Dell XE9680, equipped with eight NVIDIA H100 or H200 GPUs, consume over 7 kW per node, surpassing the 200–400 W baseline of traditional servers. This seismic shift in power demand transforms the economics of AI infrastructure. Ready to get started?

Start a conversation with our architect experts or create your own pilot by. In this 2026 edition of the Data Centre Construction Cost Guide, we examine data centre development costs across key Asia Pacific markets and explore the major themes influencing cost escalation and development strategies. Cloud computing provides compute resources and services over the internet or a private network through an on-demand delivery model in which an organization pays a cloud provider for the use of its infrastructure and applications and for the management of the underlying cloud infrastructure. Depending on the scale of the data center, the cost for hardware can range from \$200,000 to over \$5 million.
