How to apply quotas for cable management racks

Overview

If you are using the ONTAP CLI to configure and manage usage quotas, refer to Logical Storage Management. How do I plan a network rack for modern requirements?

Plan for 30% extra U-space and 6+ inches of extra depth. Modern racks must accommodate deeper PoE++ switches, thermal ventilation for 10Gbps equipment, and stricter bend radii for Cat6A cabling. It is important to follow all groups or in loops may create electromagnetic interference (EMI) due to induction. Microsoft Fabric provides limits, also known as quotas, which determine the maximum number of Fabric Capacity Units (CUs) for each of the capacities on your subscription. This applies to installing them into the cable management arm and retaining them to the rack, brackets, and other features that might be provided for cable management. Note: Install and route the communications cables, starting with the smallest diameter first and then progressing to the largest.
