How to choose a 1000mm deep server rack for island applications

Overview

4") is an industry standard server rack depth, many IT techs prefer 1200mm (47. 2") racks for today's modern installations with high density cabling and power hardware. Most IT environments default to 42U, 19-inch width, and 1000-1200 mm depth unless space constraints or special equipment dictate. Which server rack width do I need?

Our server racks have a width of 600 or 800 mm, it is important to know that this does not make any difference for the. For server racks and IT racks, hosting servers, storage or uninterruptible power supplies we would recommend a minimum depth of 1000mm to allow enough room for the devices to be mounted whilst leaving sufficient space behind the device to mount a Rack PDU and connect the power or network cables. 1000mm+ depth: Best for high-density servers and data centers, offering more room for cable management and airflow channels. Countries like Kazakhstan and Bolivia, where equipment import might be varied, should always check exact device depth before purchasing a rack.
