How to configure a KTC distribution box

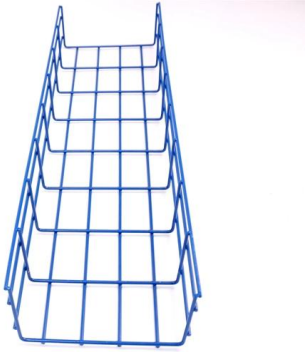

Overview

Use the official manual/download page or the model-specific quick guide included in the box. For general setup: Check that the package includes the monitor, stand/base parts, power adapter or power cord, signal cable, and user guide. AVOID setting up the equipment near heaters, air conditioners, ventilators, and/or refrigerators; DO NOT select a place that exposes your KT-NCC to direct sunlight, excessive heat, moisture, vapors, chemicals or dust. The display should be installed near an AC power socket that can be easily pluggable. It is recommended to use suitable wall mount brackets or a base for safety purpose. USB upstream and KVM on a KTC monitor may depend on the upstream connection, the switching path between devices, and whether USB-C is carrying display and data together. Wi-Fi on KTC smart-display products is usually connected during first-time setup, from a network settings screen, or from a home-screen shortcut.

How to configure a KTC distribution box

KISS 4U V2 EATX
