How to test optical cables after processing

Overview

Basically, there are three methods commonly performed for optical fiber testing: visible light source, power meter and light source (one jumper method), and optical time domain reflectometer (OTDR). These test procedures assess the physical and functional qualities of fiber optic cables, connectors, and the network as a whole. Why Does Fiber Optic Testing Matter?

Fiber internet offers better speed and performance than copper options, but the cables are very sensitive to bending, contamination, and physical.
