# **Huawei switch electrical port to optical port switching**

## Overview

---

Execute the command "combo enable fiber" in interface mode to switch to the optical interface; on the contrary, "undo combo enable fiber" switches to the default electrical interface state. A switch must use optical or copper modules that have been certified for use on Huawei switches. All-optical Ethernet switches are a type of switch that provides optical uplink and downlink ports, making them an ideal choice for building an all-optical campus network. They can function as core, aggregation, and access devices on campus networks and connect to upstream and downstream devices. CloudEngine S5731-H builds on Huawei's unified Versatile Routing Platform (VRP) and boasts various Intent-Driven Network.
