Identification of components in wiring cabinets

Overview

What are the commonly used electrical components in the distribution cabinet?

Circuit breakers, contactors, intermediate relays, thermal relays, push button switches, indicator lights, cam switches and limit switches are the eight most common components in electrical control. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems.
