Inspection of Dutch Fiber Optic Cable Junction Boxes

Overview

First step is to make an accurate inspection of the ferrule, using a video microscope. May not affect insertion loss (IL) and optical return loss (ORL) in the short term May trap dust and increase IL and ORL over time Occurs when fiber is mated while still wet Contamination will migrate from male to female fiber ends May occur during the manufacturing process or from mishandling. They define a minimum baseline of quality and workmanship for installing electrical products and systems. There are three main principles that need to be taken in consideration for an efficient optical connection: a perfect core alignment, perfect physical contact and dirt-free connectors. This fiber optic inspection scope provides automated PASS/FAIL certification take the guess work out of.
