# **Install a residual current device RCD in the distribution box**

## Overview

---

Installing a residual current device (RCD) in your ABB distribution board is relatively simple if you're a bit tech-savvy. If an RCD is available in your laboratory, the instrument and peripheral must be included in that fuse circuit. Distribution board is a safe system designed for house or building that included protective devices, isolator switches, circuit breaker and fuses to connect safely the cables and wires to the sub circuits and final sub circuits including their associated Live (Phase) Neutral and Earth conductors. Therefore, an RCD exposed to such waveforms needs to be of a suitable type, otherwise a distorted waveform (or DC) could affect the time/current operation of an RCD and cause it to operate outside its correct operating characteristics - or, at worst, the RCD could fail to current. They can be found in fuse boxes, electrical switchgears or industrial machine control systems.
