Internal wiring of signal light unit

Overview

Signal light wiring diagrams typically show the various wires, connectors, switches, and bulbs involved in the system. They also indicate the locations of fuses or relays that protect the circuit from overloading or short circuits. It provides a detailed illustration of how power flows through the system, allowing for appropriate control and sequencing of the signal lights.

An industry-standard structure for attaching terminal blocks and small electrical components to flat metal panels is something called a DIN rail. This is a narrow channel of metal - made of bent sheet steel or extruded aluminum - with edges designed for plastic components to "clip" on. The following photograph shows terminal blocks, relay sockets, See more on control flowschema
