Introducing the bending radius of optical cables

Overview

Bend radius, which measures the inside curvature of the cable, is the minimum radius installers can bend optical fibers without damaging their performance. This Applications Engineering Note (AE Note) addresses application and selection considerations for improved bend performance optical fibers (IBP fibers). IBP fibers offer operational improvements where fibers or cables are subjected to acute bends. While installers are aware of the fundamental importance of minimum bend radii, they often lack the practical know-how to. This article provides a practical, installation-focused guide to fiber bend radius, including definitions, standards, common mistakes, and best practices.
