Introduction to Optical Cable Protection Materials

Overview

Various materials offer different protective qualities, including resistance to chemicals, flexibility, fire retardancy, and tensile strength. Fiber optic cables, with their ability to transmit data as light signals through thin glass or plastic fibers, offer unparalleled speeds and reliability. However, the integrity and performance of these cables are highly susceptible to various environmental and physical factors. Relevant test programs ensure long term performance and it is always important that the right principles and methods of installation are followed. Fiber Optic Coatings: Acrylate Fiber Coating High-Temperature Acrylate Fluoroacrylate Silicone Coating Acrylate Coating Polyimide Carbon Polyetheretherketone PEEK Polybutylene terephthalate PBT Polypropylene PP Polyethylene PE LSZH (low-smoke, zero halogen) PE-PP Polyvinylchloride PVC. Larger core sizes allow a larger amount of light, or a larger beam diameter, to enter the fiber.
