Introduction to Various Bends in Cable Trays

Overview

Cable tray bends are designed to guide cables around obstacles, changes in direction, or elevations in an electrical system. Why Bending is Essential in Wire Mesh Cable Tray Systems In most installations, wire mesh cable trays need to be adapted to fit specific architectural spaces. en completely installed, without damage either to conductors or structural system use maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. There are various types of joints depending on the specific requirements of the installation. An adjustable bend with 30°, 45°, 60°, 75° and 90° configurations is also available for medium and.
