Is ADSL fiber optic cable

Overview

ADSL uses copper cables and offers limited asymmetric speeds that are highly dependent on distance and the condition of the cabling. Optical fiber uses strands of glass or plastic and pulses of light, allowing for greater speed, symmetry, lower latency, and greater stability. A stable, fast, and reliable internet connection is no longer a luxury nowadays; it's an indispensable, basic facility for every organization. These wires, known as coaxial cables, are typically the same wires employed by your TV service.
