# **Maximum bandwidth of fiber optic patch cords**

## Overview

---

According to different transmission distances and bandwidth requirements, the products are divided into two categories: single-mode (OS2) and multi-mode (OM2, OM3, OM4, OM5), supporting high-speed network transmission from 1G to 400G/800G. Fiber-optic cable bandwidth determines how much data your network can handle, directly impacting business operations from video conferencing to file transfers. This guide walks you through every variable that matters: fiber type, bandwidth rating, maximum distance, connector compatibility, and real-world deployment scenarios. By the end, you'll know exactly which cable type — OS2, OM3, OM4, or OM5 — belongs in your specific environment. Fiber optic patch cords are key components for efficient, low-loss optical signal transmission between devices and fiber optic cabling links. They are manufactured and tested in compliance with TIA 604 (FOCIS), IEC 61754 and YD/T industry standards.
