# **Multimode and single-mode optical fibers can be mixed**

## Overview

---

Because the core diameter of single-mode fiber and multi-mode fiber is very different, it will lead to too much insertion loss when matching them. Can you mix multimode and single mode fiber in one network?

You can mix them using media converters, SFP transceivers, or mode conditioning patch cables. Fiber optic communication is a method of transmitting information from one place to another by sending pulses of light through an optical fiber. The light forms an electromagnetic carrier wave that is modulated to carry information.
