Network cable fiber optic pigtail

Overview

A fiber optic pigtail is a short optical fiber cable that has a connector on one end and an exposed (unterminated) fiber on the other. The connector end plugs into devices like transceivers or patch panels, while the bare end is typically fusion spliced to a fiber optic cable. They are the bridge between fiber optic cables in the field and the equipment or patch panels that manage them. By combining factory-installed connectors with spliced bare fiber, pigtails ensure that network installers can create fast, reliable, and cost-effective terminations.
