One fiber optic cable uses two switches

Overview

Short answer: Usually yes, you use them in pairs, but the "pair" can be a media converter on one end and a fiber switch (or SFP in a switch) on the other, as long as both sides speak the same speed, wavelength, and optical mode. In this article, we'll explain how to connect multiple Ethernet switches using fiber optic cables and the equipment required for this to work. Network topology refers to the way in which the links and nodes of a network are arranged in relation to each other. - Did you mean the patch lead?

otherwise you'd need right length LC-LC patch leads as well. there are few variations and if you need one specific type, you could have "Multimode 50/125 OM3 type fibre cable with LC/LC terminators" I'd just start with one link first and test the connectivity, if its. Other than entry level network switches, most of today's network switches include one or more GiBC (Gigabit Converter) or SFP (Small Form-factor Pluggable) slots.
