## Overview

---

An electrical port module, also known as an optical-to-electrical port converter module, is a hot-swappable device with an SFP form factor. Since Ethernet transmission over UTP cables is generally limited to distances of. Fiber optic connectors connect optical fibers and can be connected and disconnected faster than splicing. An SFP (Small Form-factor Pluggable) is a compact, hot-pluggable transceiver module that allows networking equipment — including switches, routers, servers, and media converters — to support different physical media, such as optical fiber or copper, without replacing the host hardware.
