# **Optical and Electrical Ports of Gigabit Switches**

## Overview

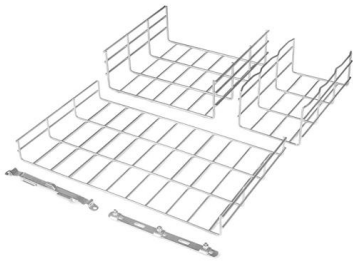

---

In today's market, Gigabit Ethernet switches are commonly equipped with two types of ports: RJ45 ports and SFP ports. Both ports support data transmission over Gigabit Ethernet, however, there are significant differences between them and different wiring methods are required. RJ45 ports serve access-layer copper connections; SFP/SFP+ ports enable flexible 1G/10G uplinks; SFP28 delivers 25G for modern data centers; QSFP+ and QSFP28 support high-density 40G/100G spine-leaf. Interesting Black Technology of 5G Radio Frequency A lot of customers in the purchase of industrial Ethernet switches will ask how many optical and electrical ports of switches, but also will ask what the difference between the electrical and optical ports of industrial Ethernet switch is, what is.
