Power Consumption Calculation for Distribution Box

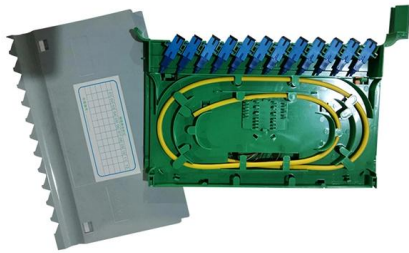

Overview

Circuit Load (Amps) = Appliance Wattage / Circuit Voltage But hold on—you can't max out the breaker! Electrical codes (like NEC) require breathing room.
8 Example: Need a circuit for your 1,800W microwave?

Total Demand = (Appliance 1 Watts × Usage Factor) + (Appliance 2 Watts × Usage Factor) + . 6 Central or Distributed Installation of Low-voltage Supply 29
On the contents page you will find a listing of the subchapters. Proper load calculations ensure that electrical systems are safely designed with adequate capacity for present and future needs.
