# **Pre-construction assessment of relay protection**

## Overview

---

A comprehensive testing program should simulate fault and normal operating conditions of the relay. The testing and verification of relay protection devices can be divided into four groups: Type tests are needed to prove that a protection relay meets the claimed specification and follows all relevant standards. All these changes necessitate a fundamental re-evaluation of both the theoretical underpinnings and the practical methodologies of relay protection are formidable technical challenges. Only correctly operating protection relays protect your primary equipment from damage and contribute to a reliable power grid. First Consideration: Why do we test?

Because NERC says so! What the NERC Study Tells Us! Second Consideration: What do we.
