## Overview

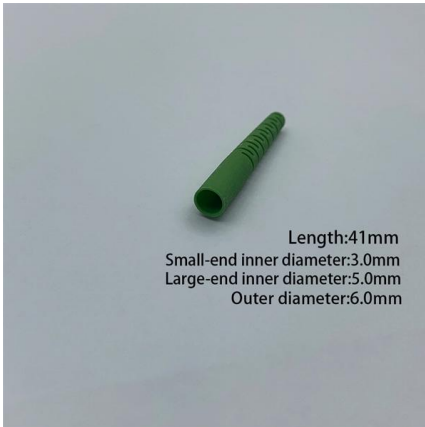

---

Characteristics: The zinc layer is thin, bright, and uniform, but offers relatively weak corrosion resistance. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. Other common options are: Continuous (pre-galvanized) coatings - often called Sendzimir or pre-galvanized. , is a welded wire-mesh cable management system made of high-strength steel wire. It is essential to distinguish between the two main galvanizing processes for cable trays, as their zinc coating ranges and applicable standards differ entirely: Process: Deposits a layer of zinc onto the steel surface through electrolysis. A cathodic action occurs on cut s leaned and roughened in order to achieve a good bond. Cable tray systems are defined to include, but are not limited to straight sections of.

Crafted from superior quality JSW Steel, these cable trays are hot dip galvanized to provide exceptional resistance against corrosion, enhancing their lifespan and

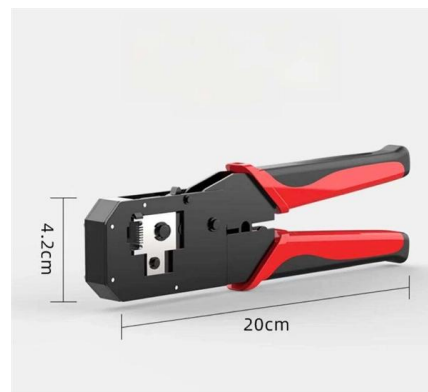

### Technical specifications CT15 (Cable Tray perforated)

An added advantage of hot-dip galvanizing is that along the edges and pointy bits, where objects are usually extra susceptible to corrosion, the zinc coating is thicker because of the behaviour of the liquid.
