Quantitative Private Equity AI Server

Overview

We are pleased to announce the release of Quantium's MCP Server – a secure, standardized connection layer that enables private markets firms to connect enterprise AI tools directly to Quantium's trusted data infrastructure. Find the latest information, updates and resources for audit committees as well as sample charters, agendas and assessments. AI today is spreading across PE, transforming investment processes, fundraising and firm management. Generative AI is asserting itself as a game-changing technology across the global economy. According to Bain & Company's 2024 Global Private Equity Report, companies use this technology to automate back-end functions, conduct due diligence, and evaluate portfolios. However, the "era" of exploratory AI initiatives without clear performance metrics is waning.
