## Overview

---

Verification cycle of relay protection device In order to ensure the requirements of selectivity, rapidity, sensitivity and reliability of relay protection devices, users with high requirements for power supply reliability and users of 60kV and above shall generally be. to protect both human lives and equipment as well as ensure uninterrupted power supply. ABB's knowledge and experience are not limited to relays only, full support for all protection and control relays throughout their entire life cycle. As the service life of these devices exceeds multiple decades, questions regarding when and how to strategically replace these relays are increasing. Over time, both older electromechanical relays and newer solid-state or microprocessor-based relays can wear down or fail in ways that are. In electrical engineering, a protective relay is a relay device designed to trip a circuit breaker when a fault is detected.
