### PAM4 Signal Modulation and Digital Signal Processing-Based

The PAM4 signal maps the L (least significant bit) and the M (most significant bit) to a 4-level amplitude, each level representing 2 bits of information. The PAM4 signal is equivalent to M L/2 in Fig. 11.1.

Analyzing PAM4 Signals  
Critical Test Equipment Requirements  
PAM4 (4-level pulse amplitude modulation) is being adopted in many applications at data rates of 50 Gb/s and higher. By encoding two bits in each symbol, PAM4 signals use half the bandwidth of the logic-emulating NRZ (non-return to zero) modulation scheme to transmit at the same data rate. Operating at half the bandwidth sidesteps the crippling eSee more on tek NVIDIA Docs
