# **Sealing of power cable trays in electrical wells**

## Overview

---

Technical guide to firestopping cable tray and slab penetrations in electrical shafts; specifies materials, packing limits, waterstop heights and installation sequence. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. Standardize with Roxtec penetration seals in di pecification of cable entry seals be a field-based decision. Include it in the design and engineering s ope to ensure safety and r o use - from the power generation through to distribution.
