## Overview

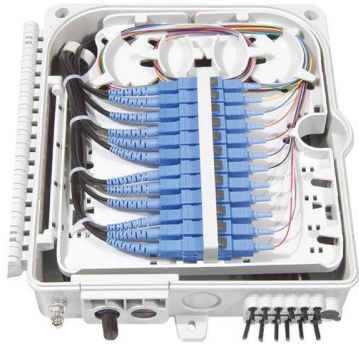

---

Silicone and rubber are the most common, but special flexible PVC, which has excellent flexural fatigue strength, aging, and ozone resistance, and ethylene resin, which has excellent chemical resistance, insulation, and low friction, are also available. The lifelines of highly automated industrial production for electrical distribution and for the control and safety technology of manufacturing plants come together in control cabinets and electrical distribution boxes right down to the micro distribution boards. Our sealing modules have removable layers enabling a perfect fit to cables and pipes of different sizes. Choose from our selection of electrical enclosure seals, including gasket tape for enclosures, washdown hole plugs, and more. Seal & Design converts many foam, sponge and rubber sealing systems to accommodate any sealing situation.
