

**Adam Tas Corridor Energy**

# **The Global Energy Interconnection as a**

## Overview

---

The Global Energy Interconnection (GEI) Journal publishes original research on theories and developments as well practical applications on principles of large scale low carbon energy generation, transmission, distribution & storage technologies, global energy interconnection . Global energy interconnection (GEI) represents the ultimate evolution of the trend towards greater interconnection of power systems. China's concept of Global Energy Interconnection recognizes the importance of energy inter-connectivity for clean energy transition and repre-sents one of the boldest visions for low-carbon development at the national, regional strial Revolution in the 1870s. It is an important platform for large-scale development, transmission and utilization of clean energy resources at a global level, promoting the global energy.
