Overview

Bends, tees, reducers, covers, and supports all add cost, not just to purchase, but to install. Systems that rely heavily on prefabricated accessories usually carry a higher total installed cost, even if the tray itself is competitively priced. The main components of a cable tray system include tray sections, fittings, supports, and accessories. Cable trays will tend to be significantly less expensive to use in 2026 than metal pipes due to their faster installation. Aluminum wireways cost \$8-15 per linear foot vs steel at \$3-8 per foot. Installation adds \$12-25 per linear foot depending on complexity and mounting method. Total project costs range from \$15-40 per linear foot including materials and labor. Surface-mounted systems cost 20-30% less than suspended. The price structure typically reflects the material composition, whether aluminum, steel, or fiberglass, along with the specific design requirements and load-bearing capabilities.
