# **The function of fiber optic connectors in drilling**

## Overview

---

Fiber optics help optimize drilling operations by providing real-time data on downhole conditions. Fiber allows longer transmission distances and higher data rates than copper — a fortuitous development, as offshore drilling moves to deeper depths. The connectors in these applications must survive HPHT and corrosive environments and still deliver outstanding electrical and mechanical performance. DAS and DVS technology uses optical fibers to monitor and analyze acoustic signals generated by downhole activities, such as hydraulic fracturing, drilling and production.
