The power distribution box is not lit

Overview

Long cable runs can result in a voltage drop, which can be solved by using a heavy gauge wire. Use a volt meter to measure voltage at the power supply and at the power distribution box. A PDU is a device that distributes electrical power to multiple AV components, such as monitors, projectors, amplifiers, and other equipment in a meeting room. If the suggested corrective action does not return the equipment to normal operation, contact Schneider Electric for assistance. So long as this level is not exceeded, your WattBox should pr rack, and it's likely that the chained devices may draw more power than the PDU's rating. When this happens, the PDU flips to Overcurrent Protection Mode, shutting of to prevent permanent damage to itself and the devices it.
